Projects:

Money Tracker

It's a simple CRUD Android Application that keeps Track of the user's income and expense. The user's data is stored in the cloud using firebase. It also displays the data in a Donut Chart for the user to analyze has option to download the data and load it into a spreadsheet software.

New age Ticketing System

An Android Application that can be used to buy tickets for the public bus through internet and can be used to track the location of buses. It also uses a penalty system to monitor and ensure the quality of transport. Made this as the UG project.

PayAPI

A multi page Landing Site for a payments API provider. It was developed using React.js and Next.js for static site generation and better SEO rankings.

DevJobs

A Job portal with role based authentication system. It was developed using React.js, Next.js and Express.js. It uses token based authentication system. The entire authentication system was built from ground up.
